Open-top coco coir bags

Individual container format | Buyer & preparation guide

Pre-filled coco coir bags provide an individual root-zone container for nursery, berry, ornamental and selected greenhouse production. Choose the bag around crop spacing, support and irrigation rather than volume alone.

Supplied Avee photo. Confirm the quoted configuration.

01 CHOOSE THE FORMAT

Compare nominal volume with expanded dimensions, usable fill height and hydrated weight. Confirm whether the stated gallon size uses US or Imperial gallons; use litres when comparing formats.

02 PREPARE FOR YOUR GROWING SYSTEM

Position before hydration
Place each bag on the intended support. Check stability, emitter position and free drainage.

Hydrate the supplied format
Follow the instructions for the ordered fill and treatment. Check for even wetting, including the centre of the bag.

Check before planting
Confirm drainage works and use the agreed EC/pH methods. Set nutrition and irrigation for the crop and source water.

03 SEND A USEFUL QUOTATION BRIEF

Product or nominal volume; expanded dimensions; crop and system; required quantity; preferred blend; bag material/UV requirement; drainage layout; postal or ZIP code; required date; receiving access.

Washing, buffering and hydration are different steps. Ask for the specification and available laboratory reports for the ordered product or batch. Stock, minimum quantity, packing, price and freight are confirmed by quotation.
